

THE SCIENTIST, THE SHAMAN AND THE SHAMAN'S SHAMAN: CLIMATE CHANGE AS ONTOGRAPHICAL CHALLENGE

**29. November 2016 / 18:15 - 19:45 Uhr /
Aníbal García Arregui, Universität Wien /
Universität Bremen / Rotunde im Cartesium /
Enrique-Schmidt-Str. 5 //**

Trees and rainfall are related. Everybody knows that. But, to what extent? A climate scientist and a shaman claim that Amazonian trees are determining atmospheric dynamics on a global scale. But are they really talking about the same forest? The same rain? The same world? This talk engages with what has been presented in the vocabulary of the recent ontological turn as being incommensurable anthropological differences. Aníbal G. Arregui assesses this discussion and the role of its new actors against the backdrop of climate change and environmental degradation. /
